In the admirable series of mathematical text-books, still unequaled in many essential particulars, which the late Professor Charles Davies issued, the **Elementary Algebra** has an important place. The intent and scope of the work is set forth in the preface to the latest edition that the accomplished author prepared: Algebra naturally follows arithmetic in a course of scientific studies. The language of figures, and the elementary combinations of numbers, are acquired at an early age. When the pupil passes to a new system, conducted by letters and signs, the change seems abrupt; and he often experiences much difficulty before perceiving that algebra is but arithmetic written in a different language. It is the design of this work to supply a connecting link between arithmetic and algebra; to indicate the unity of the methods; and to conduct the pupil from the arithmetical processes to the more abstract methods of analysis, by easy and simple gradations. The work is also introductory to the **University Algebra**, and to the **Algebra of M. Bourdon**, which latter is justly considered, both in this country and in Europe, as the best text-book on the subject which has yet appeared.
