Excerpt: . . . importance in the United States. The bean canker is a disease of French and scarlet runner beans. In 1901, many reports were received by the New York experiment station relative to a disease of the bean plant. The stems of nearly grown plants were broken over at the joints and an examination revealed the appearance of rotting at the joints. The trouble came to be known as the joint rot of the bean stem. Professor Stone tells us that the real character of the trouble and its cause were not discovered though it was supposed to be due to excessive rains. Inquiry the following season in the bean fields did not reveal its presence in spite of the fact that the season was characterized by greater abundance of rain than the preceding one. INSECT PESTS Bean weevil (*Bruchus obtectus*) is a formidable enemy of...
